ENGINE NUMBER: _____

DATE: _____

A **CENTRIFUGAL ADVANCE KIT** is already installed by us in your new engine's distributor.

The HEI, Pertronix, etc. vacuum advance is plugged by us because we installed a bushing and/or spring set.

Advance Springs: The rate, or how quick the advance comes in, is determined by the type of springs which are installed on the distributor.

Stop Bushings: The stop bushings are responsible for limiting the amount of advance.
